The *ARX extension for AutoCAD allows mapping of model elements with external database entities that is generated and stored in the drawing itself. The *ARX format is XML-based and is decoded by the software. Functionality AutoCAD supports the following drawing functionalities: Parametric modeling Drafting 2D and 3D drafting Mechanical Architectural Visualization 2D and 3D modeling Structural Conceptually, AutoCAD is a parametric modeling application, because it supports the whole modeling pipeline, from data creation to model execution. Modeling takes place in a hierarchical layer of entities. In a typical work process, objects are created and their properties are adjusted, such as name, level, position, dimension, properties, constraints, and part definition. Components (objects) are grouped and connected to each other into assemblies. The assemblies are then grouped into documents and documents are presented to the user. The drawing functionality includes two features: Screen Space - user interface Database Space - data storage and management Screen Space The screen space interface allows creation of drawings on screen using a variety of predefined input modes. These are the basic inputs to AutoCAD, including mouse, keyboard, and pen (active tablet input), and will be defined on installation of the AutoCAD product. Commonly used input modes include: Drafting Input - Creating 2D drawings. Screen Viewer - Displaying drawings on screen. Properties Pane - Setting the properties of the elements of the drawing. Palettes - These include, but are not limited to, Lines Text Fills Shapes Symbols Customizable Palettes can also be created and saved. All elements created by the user may be saved and reused in other drawings in a project. Objects can be selected and automatically saved by pressing the Save button. Database Space The database space of AutoCAD is the AutoCAD drawing workspace in which the user creates and manipulates models, and where these models are stored. It contains the information necessary to complete the work process. The database space contains the following: Model database - Stores AutoCAD model information and supports the creation, editing and deployment of drawings and models. Drawing database - Stores drawing information and supports the creation, editing, conversion, review and deployment of drawings. Work process The AutoCAD work process is divided into several stages which 5b5f913d15

Command history can now be appended to the end of the command line for each command. Coordinate Window: Create visual indicators to show the intersection of two lines or points. Coordinate windows help you quickly specify lines or points that need to be considered when you're drafting. Coordinate windows are perfect for showing intersections between lines, points, or circles. The window can be activated and deactivated as needed by selecting the coordinate window from the command line or by choosing the Window > Coordinate option from the ribbon. Drawing Tools: Use the new Drawing Tools options to define custom tool types for any drawing element. Custom tool types can now include custom drawing tools (including custom drawing tips), palettes, or hyperlinks. You can quickly access new drawing tool types without having to open a new toolbox. Drawing Tips: Use the new Drawing Tips tool to access a palette of drawing tips for a specific drawing element or tool. Each drawing tip can contain a visual cue, command, or a hyperlink. Drawing tips can be individually
