Geographic Calculator is the professional GIS conversion tool that can translate, scale, inverse, best fit, data look up in many file formats. This tool is created to offer you the widest choice for the most common GIS data formats used. Geographic Calculator has many unique features such as: Automatic creation of outputs and sources Ribbon menus for all operations Free transformation and cross reference tables Expandable views Export to HDF5, and Mathcad/Mathcad 2007, as well as ASCII (datum shift, offsets and projection) Scheme link in the GeoTIFF file and many more... Features: Features No time limit when converting many data sources simultaneously Ribbon menu for all operations with double click Support for personal and batch processing PDF and Word preview and export Big collection of hotkeys Free transformation and cross reference tables Export to HDF5, and Mathcad/Mathcad 2007, as well as ASCII (datum shift, offsets and projection) Language: English Category: Computer Software Release date: December 2, 2012 Developer: SourceForge: Use this as a professional tool for geospatial conversions in office environments and for emergency situations. This is easy to use tool to solve geodetic data conversion problems and dealing with DEM file. It can convert from one format to another. All format supported. Target format will be saved. All files are compressed. DEM format support. Very easy to learn. * BUG USERS PLEASE, TELL US THE BUGS* You can help us to be more usable. Please tell us if you find any error on the tool. If you want to get the latest version, you can visit our Website www.cicatalogue.com Description In this article we will discuss how to convert GeoTIFF files to Mapinfo TAB files using Geographic Calculator. Geographic Calculator software converts geo-referenced data from various formats to Mapinfo TAB format. How to Convert GeoTIFF to Mapinfo Tables This tutorial aims to help users to learn how to use the Geographic Calculator application for geodetic transformation and conversion of GeoTIFF to MapInfo TAB. Geographic Calculator allows users to

This is a map calculator Geographic Calculator is a Map/Data/Database/Georeferencing/Geospatial Data/Preprocessing/Data Management/Data Conversion/Data Processing application that is compatible with MS Windows platforms. It offers you the possibility to easily convert, translate and work with different types of data, with the use of several built-in tools. Geographic Calculator offers you the possibility to: - Convert, resize, scale, transform, take offsets, invert data, do intersection, union and subtract operations, transfer and plot contour data, make a boolean, calculate area, length, and many other standard GIS data types operations. - Convert one/more supported formats to other formats with the use of Data Converter - Create topologically correct maps with over 25 different map projections, all with the use of a map viewer - Undo all modifications applied with the use of Map Editor - Export the output data into several supported file formats. These include GeoTIFF, TFW/WLD, JGW, BMP, JPG2000, ECW, LizardTech MrSID and others. - Display and edit geodetic data formats as well. - Convert from WGS84 to different locales and datums with the use of Project Manager - Edit and import feature class data with the use of viewer and data source commands. - Export with the use of a viewer to GeoTIFF and TFW/WLD (TFW/WLD Data Viewer) - Edit and convert data from one format to another format with the use of Data Converter - Create your own processing templates with the use of project manager - Merge multiple projections with the use of map viewer - Extract a range of data from a file or a table - Export the results to several standard formats, including GeoTIFF, TFW/WLD, JGW, BMP, JPG2000, ECW, LizardTech MrSID and others - Create a map with 3D object support - Work with data stored on a server with the use of a viewer - Invert data with the use of Map Editor - Split and join data with the use of Map Editor - Display text on a map with the use of Map Editor - Navigate and query data with the use of Map Viewer - Export to Excel, Google Earth and other formats with the use of Map Editor - Work with and compare data stored 09e8f5149f

* Calculator to convert geospatial data, grids and data * Create and edit conversion forms * Translate grids and data using multiple formats * Virtual datum, scale and translate * Geolocate data using multiple formats * Create and edit project forms * Create custom conversion forms * Perform various geospatial operations * Point database * Vector data * Seismic survey * Skew / Rotate / Mirror * Create xref from files and create xref from existing layers * Convert image formats into layers * Freehand editing tools * Geodetic data * Import vector data * Export vectors in several formats * Calculation of TMS, CRS, vector and other attributes * Multiple (Join) conversions for any input combinations * Layer editing, conversion, skew, move and cut * Conversion and processing of multiple layers in one go * Copy/Delete of multiple layers at once * Export to GML, Shape, TIFF or Create Project * Transform data layers with one click * Edit name and comments of multiple layers * Extract/create/replace names of multiple layers * Advanced raster processing * Export raster and vector data * Export to ESRI Shapefile, ASCII and TFX, Geodatabase, XML and other formats * Export layer to a.pdf or.jpg file * Import XML layer from the web * Multiple databases of information * Create, import, export and organize your projects * Project management and organization * Import georeferenced data and use them as point layer and create vectors * Import geographic data * Create, import, and delete tables of information * Import/create and update geodetic data * Import/create grids, vectors, images, image editing, point database * Import/create, import and edit models, coordinates * Import/create and edit grids, vectors, images, and databases * Import/create grids, vectors, image and vector editing * Import/create coordinates, models, vectors, raster and shapefile editing * Import/Create and edit ID values, coordinates, tables of information * Import/create and update geodetic data * Edit coordinates, lines, polygons, vectors, raster and shapefile * Import/create and export grids, vectors, image and vector editing * Import/Create/Add/edit grids, vectors, images, vector and r

What's New in the Geographic Calculator?

At first, this application is a simple GIS tool that can be used for GIS ‘Interactive’, ‘Point Database’, ‘Seismic Survey’ and ‘Vector Data’ conversions. The user has to fill in a project database, enter input and output data, execute some calculations and see the results. The information can be very diverse and with Geographic Calculator you have the opportunity to deal with large data sources such as: • GeoTIFF, MapInfo Table, ESRI World (TFW, WLD, JGW), BMP, JPG2000, Enhanced Compressed Wavelet (ECW) and LizardTech's MrSID. • The conversion operation can be: • best fit • scale and translate • inverses • datum shift • view • project • import • edit • create (processing templates). • The user can choose to use several images at once. • The output data can be: • PDF • PNG • JPG2000 • BMP • TIFF • JPEG • RLE • ESRI shapefiles. • The option to save the results in the output database is also provided. • This application is equipped with an advanced project manager, which allows you to organize the different projects you are going to work on. • You can quickly apply the data processing steps. • The application keeps all results in its own database, so you will not have to import or export any data to complete your project. • At the end of the project, the user can export the results in different formats. • In addition, Geographic Calculator gives you access to many data source commands, so you can convert your data sources. These commands will be used inside the 'User interface'. You get to have access to the database of projects you work on with the use of ‘Project Manager’ and you can select which operations are going to be used for the job. The commands are: • Data Source • Calculate • Sort • Sort List • Sort in list • Export: XML • Import • Choose • Apply Data Processing: • User interface • Display: • Layer • Display Types • Layer Filters • Filter Field • Filter • Fuzzy radius • By filter • By field filter • Using data for today’s

System Requirements For Geographic Calculator:

- OS: Windows 7/Windows 8/Windows 8.1/Windows 10
- CPU: Intel Core i5-3570K / AMD FX-9590
- RAM: 8 GB or higher
- Video Card: NVIDIA GeForce GTX 760
- DirectX: 11
- HDD: 2 GB available space
- Sound Card: DirectX 11 compatible sound card
- Additional Notes: All beta updates are cumulative, meaning that if you already have v1.01 installed, then you'll automatically get v1.02 if you install
